## 1. Introduction

The 2011 Wellington Transport Strategy Model (WTSM) and Wellington Public Transport Model (WPTM) have been updated to a 2013 base year by Greater Wellington Regional Council (GWRC) and Traffic Design Group (TDG). The re-calibration of WTSM and WPTM is documented in a series of technical notes written over the course of the project.

Population, household and employment forecasts for the Wellington region were developed and are outlined in TN12. The WTSM model testing is reported in TN11. This technical note details the WPTM testing and compares / validates growth against its parent model, WTSM.

Public transport demands from WTSM are applied to WPTM where they are assigned onto WPTM's more refined zone structure. This report seeks to confirm that forecast demands are being applied correctly into WPTM as a result of this recalculation process.

## 2. PT Demand Growth Validation

As with the 2011 WTSM/WPTM model the growth procedures are validated by demonstrating that the growth is correctly transferred from the WTSM matrices into WPTM at the correct proportions<sup>1</sup>.

Some differences in growth rates/proportions between the two models is expected as the WTSM base demand is generated from synthetic means, whereas the WPTM base demand is fully observed, generated by surveys and bus ticket machine data.

However, at a high level, both models should have similar growth rates and should show that growth is spatially distributed in a similar manner.

**Table 1** summarises the application of growth rates between WTSM and WPTM for the year 2023 showing the total PT trips in each model in both the base and forecast year models. WTSM has 10% more trips in both the base and forecast year. Growth between the base and forecast years is 13.7% and 14.6% for WTSM and WPTM respectively, indicating a similar level of growth is being applied.

**Table 1: Summary of Growth (AM, 2013 to 2023, all segments)**

PT Matrix	Base	Test	Change	Change %
WTSM	30,900	35,200	4,300	13.9%
WPTM	28,000	32,000	4,000	14.3%
WTSM / WPTM	1.10	1.10		-0.4%

Comparing this to the validation of the 2011 growth process, as detailed in **Table 2**, shows that both the 2013 growth process, like the 2011 process, results in WTSM growth rates being accurately applied to WPTM.

<sup>1</sup> WTSM 2011 Update: TN20 WPTM Forecasting - <http://www.gw.govt.nz/assets/Transport/Transport-models/TN20-WPTM-Forecasting-FINAL.pdf>

**Table 2: Previous Model Summary of Growth (AM, 2011 to 2021, all segments)**

PT Matrix	Base	Test	Change	Change %
WTSM	29,700	34,900	5,200	17.5%
WPTM	27,800	32,700	4,900	17.6%
WTSM / WPTM	1.07	1.07		-0.1%

AM demand growth in WTSM and WPTM for 2013 to 2023 are summarised by Territorial Authority (TA) within Appendix A in **Table 15** (work), **Table 16** (education), **Table 17** (other) and **Table 18** (all purposes combined).

**Table 3** and **Table 4** compare the WTSM and WPTM application of growth for 2033 and 2043 respectively.

Both forecast years have a similar match between WTSM and WPTM compared with 2023, showing that growth is being applied accurately for all future year scenarios.

The percentage change in trips is similar for 2033 where WTSM trips increase by 20.4% and WPTM increase by 19.6%, noting that for the 2023 comparison it was WPTM which had the greater trip increase. For the 2043 forecast year WTSM PT trips increase by 27.2% compared to the 26.1% increase which occurs in WPTM.

**Table 3: Summary of Growth (AM, 2013 to 2033, all segments)**

PT Matrix	Base	Test	Change	Change %
WTSM	30,900	37,200	6,300	20.4%
WPTM	28,000	33,500	5,500	19.6%
WTSM / WPTM	1.10	1.11		0.7%

**Table 4: Summary of Growth (AM, 2013 to 2043, all segments)**

PT Matrix	Base	Test	Change	Change %
WTSM	30,900	39,300	8,400	27.2%
WPTM	28,000	35,300	7,300	26.1%
WTSM / WPTM	1.10	1.11		1.1%

Interpeak (IP) growth between 2013 and 2023 is compared in **Table 5** between WTSM and WPTM. Note that WTSM stores the IP values as 6 hour values rather than the 2 hour average of that 6 hour period as is modelled. Due to this, factored WTSM values are also included in the tables.

The application of growth in the IP, is similar between the two models with WTSM having an increase of 10.3% compared with an increase of 14.0% in WPTM. This shows a growth difference of -3.6% between WTSM and WPTM, whilst this is not as close of a match as the AM period, it is still considered an acceptable match and similar to that of the 2011 model.

**Table 5: Summary of Growth (IP, 2013 to 2023, all segments)**

<b>PT Matrix</b>	<b>Base</b>	<b>Test</b>	<b>Change</b>	<b>Change %</b>
WTSM	14,500	16,000	1,500	10.3%
Factored WTSM	4,833	5,333	500	10.3%
WPTM	4,300	4,900	600	14.0%
Factored WTSM/WPTM	1.12	1.09		-3.6%

**Table 6** and **Table 7** compare the application of growth between WTSM and WPTM in the interpeak for 2033 and 2043 respectively. The analysis shows that, similar to 2023, while not as good of a match as the AM period, IP WTSM growth is considered to be applied successfully to WPTM.

**Table 6: Summary of Growth (IP, 2013 to 2033, all segments)**

<b>PT Matrix</b>	<b>Base</b>	<b>Test</b>	<b>Change</b>	<b>Change %</b>
WTSM	14,500	16500	2000	13.8%
Factored WTSM	4,833	5500	667	13.8%
WPTM	4,300	5000	700	16.3%
Factored WTSM/WPTM	1.12	1.10		-2.5%

**Table 7: Summary of Growth (IP, 2013 to 2043, all segments)**

<b>PT Matrix</b>	<b>Base</b>	<b>Test</b>	<b>Change</b>	<b>Change %</b>
WTSM	14,500	17,100	2,600	17.9%
Factored WTSM	4,833	5,700	867	17.9%
WPTM	4,300	5,300	1,000	23.3%
Factored WTSM/WPTM	1.12	1.08		-5.3%

A detailed breakdown of growth comparisons by trip purpose is included in Appendix A.

### 3. Wellington Station Alighting and Transfers

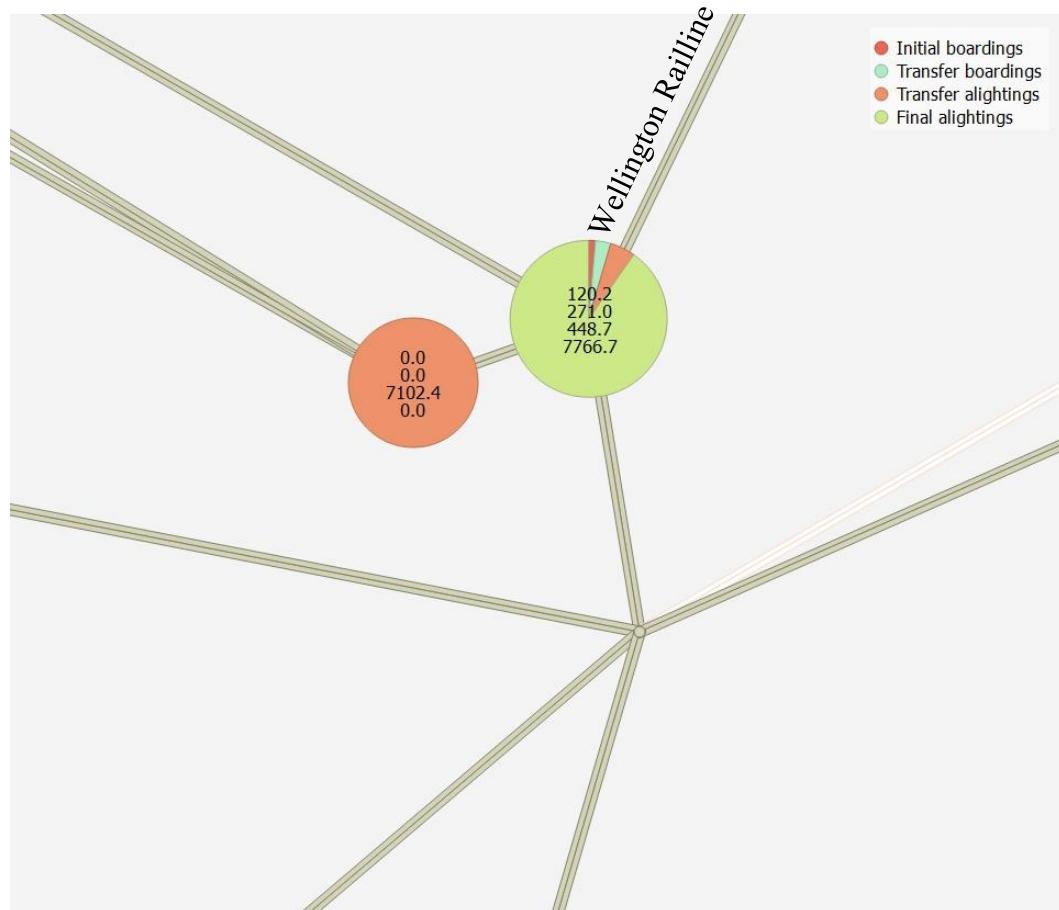

**Figure 1** shows the AM period WPTM alighting and transfers at Wellington Rail station in 2023. This shows that 7767 passengers alight at Wellington Rail Station and walk to their final destination, with 7551 (7102 + 449) alighting from rail services and transferring onto another bus service.

Comparable base year data, as included in **Figure 2**, shows that 9111 passengers alight at Wellington Station and walk to their final destination, with a further 2171 transferring onto a bus to reach their final destination.

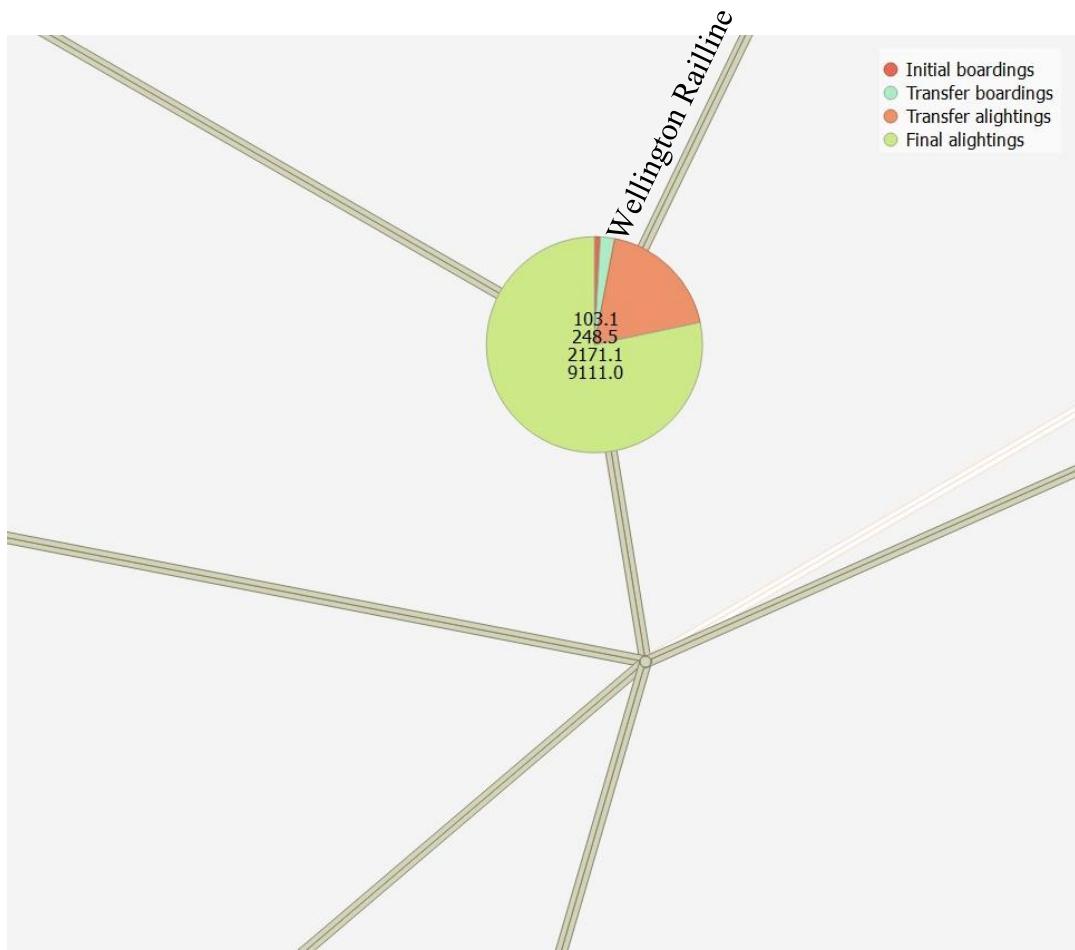

**Table 8** summarises the 2013 and 2023 boarding, alighting and transfers values for the AM period as modelled by WPTM.

**Table 8: Wellington Station Boarding, Alighting and Transfers (AM period)**

	2013	2023
Initial Boardings	103.1	120.2
Transfer Boardings	248.5	271.0
Transfer Alightings	2171.1	7551.1 (448.7 + 7102.4)
Final Alightings	9111.1	7766.7

**Figure 1: Wellington Station Boarding, Alighting and Transfers (AM, 2023)**

**Figure 2: Wellington Station Boarding, Alighting and Transfers (AM, 2013)**

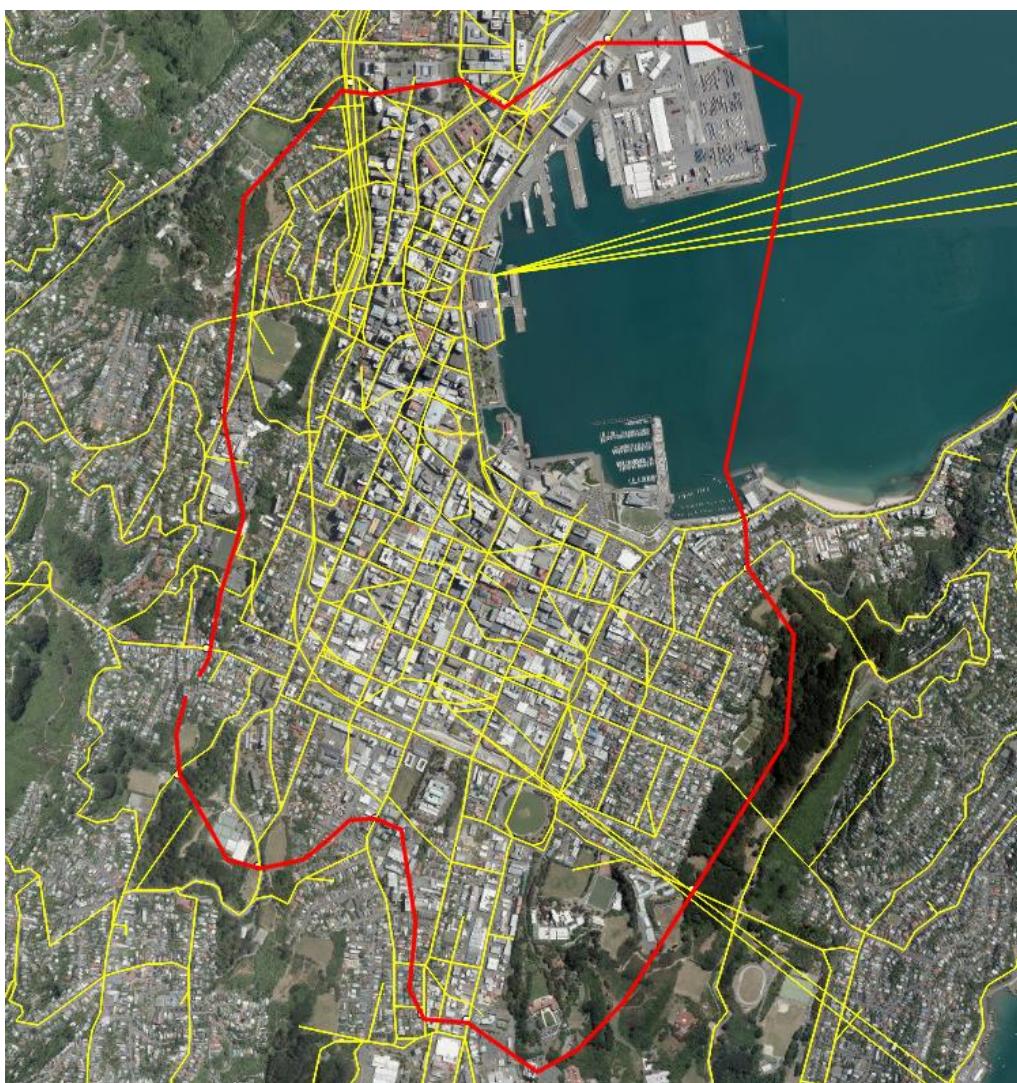

Around 50% of passengers transfer from rail services to onwards bus services in 2023. This is a much higher percentage than in the 2013 base model (~20%) that was itself calibrated to observed data that showed that around 15% of persons alighting from rail services at Wellington Station and catching a bus for their onwards journey to their final destination.

The higher level of rail to bus transfer compared with the base model is a result of the introduction of integrated ticketing, which allows passengers to effectively transfer for free between rail and bus services (or any two PT services for that matter).

When utilising WTSW and WPTM 2013 forecast outputs, GWRC and appointed consultants should consider whether it is realistic to expect that the percentage of rail transfer trips would increase from 20% to 50% as a result of integrated ticketing.

## 4. PT Screenlines

Having demonstrated previously that the growth is being correctly applied at a demand matrix level, this section seeks to confirm that the demands are correctly assigning to the network. Assigned transit volumes across screenlines are compared for WPTM in the forecast years against WTSM in the same forecast years to demonstrate that the changes in patronage are broadly similar between both models. The screenline locations are as indicated in **Figure 3**, these locations tying in with the annual bus cordon surveys.

**Figure 3: Wellington CBD Screenline Locations**

The screenlines have been broken down into north, east, south and west quadrants. The North Screenline crosses the following locations:

- Rail Line,
- Molesworth Street,
- Mulgrave Street,
- Thorndon Quay, and
- Waterloo Quay

The West Screenline crosses the following locations:

- Bowen Street,
- Cable Car Line,
- Kelburn Parade, and
- Aro Street

The South Screenline crosses the following locations:

- Ohiro Road,
- Brooklyn Road,
- Wallace Street,
- Tasman Street, and
- Adelaide Road

The East Screenline crosses the following locations:

- Mt Victoria Tunnel,
- Hataitai Bus Tunnel,
- Hawker Street, and
- Oriental Parade

**Table 9** compares the AM peak PT passenger volumes between WTS defence and WPTM summarised across the four screenlines, for the base year and three forecast years.

The inbound totals generally show a good match between WTS defence and WPTM and generally similar trends are seen between the two models into the forecast years. The exception is the north screenline in 2023 where, WPTM is showing 1290 less PT trips than WTS defence. Forecast rail volumes are lower in WPTM than WTS defence, whereas bus volumes are higher, which suggests that PT users are shifting between rail and bus during assignment of the two models. Differences between WTS defence and WPTM rail and bus assignment is investigated in the next section.

**Table 9: Comparison of WTS defence and WPTM Screenline Volumes Entering CBD**

Screenline	2013			2023			2033			2043		
	WTS defence	WPTM	Diff	WTS defence	WPTM	Diff	WTS defence	WPTM	Diff	WTS defence	WPTM	Diff
North Rail	11280	11280	0	17750	15320	-2430	15940	15020	-920	15900	14850	-1050
North Bus	2420	2670	250	2000	3140	1140	2120	2720	600	2320	2920	600
North Total	13700	13950	250	19750	18460	-1290	18060	17740	-320	18220	17770	-450
West	1310	1460	150	1670	1680	10	1590	1560	-30	1660	1640	-20
South	2670	2630	-40	3130	3140	10	3050	3000	-50	3160	3190	30
East	2210	2010	-200	2950	2730	-220	2910	2620	-290	3310	2810	-500
Total	19890	20050	160	27500	26010	-1490	25610	24920	-690	26350	25410	-940

A detailed breakdown of PT volumes across screenlines is included in Appendix B.

## 5. PT Line Usage

On several corridors into Wellington, such as between Johnsonville and the Hutt Valley, modal choice exists between bus and rail.

As WPTM and WTSM have difference zone systems, representations of PT costs and base levels of demand, it is to be expected that modal choice will differ between the two models.

The analysis presented in this section looks at differences in rail and bus passenger volumes by line and origin between the two models for the base year and various forecast years.

**Table 10** presents the rail passenger volumes entering and exiting Wellington Station in both WTSM and WPTM.

**Table 10: WTSM and WPTM Rail Passenger Volumes Entering Wellington Station, AM peak**

Rail Service	2013		2023		2033		2043	
	WTSM	WPTM	WTSM	WPTM	WTSM	WPTM	WTSM	WPTM
Hutt	4979	4279	6880	5202	6227	5243	5821	4845
Johnsonville	1180	945	3013	1859	2451	1855	2710	1973
Kapiti	4143	4578	6416	6315	5983	6078	6181	6248
Wairarapa	243	328	219	396	211	366	223	368
Total	10546	10131	16529	13771	14873	13543	14936	13434

The absolute passenger increases in the forecast years for both WTSM and WPTM are shown **Table 11**. Across most of the lines and forecast years, WTSM has a higher absolute change in passenger volumes. WTSM generally shows a greater increase in PT patronage compared to WPTM, particularly in the 2023 forecast.

**Table 11: WTSM and WPTM Rail Passenger Volume Growth (relative to 2013) Entering Wellington Station, AM peak**

Rail Service	2023			2033			2043		
	WTSM	WPTM	Diff	WTSM	WPTM	Diff	WTSM	WPTM	Diff
Hutt	1901	923	978	1247	964	284	842	566	276
Johnsonville	1833	914	919	1271	910	361	1530	1028	502
Kapiti	2273	1737	536	1840	1500	340	2038	1670	368
Wairarapa	-24	67	-91	-32	38	-70	-20	40	-60
Total	5982	3641	2341	4326	3412	914	4390	3303	1087

This section has shown that the rail line usage into and out of Wellington is much lower in WPTM compared to WTSM.

As the forecast growth between the two models is relatively similar, as outlined in **Section 2**, this suggests that rail passengers may be using alternative means to enter the Wellington CBD.

**Table 12** shows bus passenger volumes entering Wellington in WTSM and WPTM on two arterials – Hutt Road and SH1 (Ngauranga Gorge). Across all forecast years WPTM has higher bus passengers than WTSM.

**Table 12: WTSM Bus Passengers Entering Wellington, AM peak**

Location	2013		2023		2033		2043	
	WTSM	WPTM	WTSM	WPTM	WTSM	WPTM	WTSM	WPTM
SH1	390	459	211	434	228	432	251	439
Hutt Road	1916	2139	1590	2483	1729	2183	1888	2345

**Table 13** shows the absolute change in bus passenger volumes between the base and forecast years in both WTSM and WPTM. Bus passenger volumes heading towards Wellington using Hutt Road decrease in WTSM but increase in WPTM, suggesting that the bus remains attractive for certain journeys in WPTM compared with WTSM, where bus volumes decline.

Bus passengers on Hutt Road mostly originate from the Johnsonville/Newlands area, with small proportion originating from the Hutt Valley.

**Table 13: WTSM and WPTM Forecast Passenger Changes from Base Year, AM peak**

Location	WTSM			WPTM		
	2023	2033	2043	2023	2033	2043
SH1	-179	-161	-139	-25	-26	-20
Hutt Road	-326	-187	-28	344	45	206

The absolute difference in bus passenger volumes between WTSM and WPTM is shown in **Table 14**, with a positive value implying that WTSM volumes are greater than WPTM volumes.

**Table 14: WPTM vs WTSM Comparison of changes in bus passenger volumes, AM peak**

Location	2013	2023	2033	2043
SH1	69	223	204	188
Hutt Road	223	893	455	457

This shows that the difference between WPTM and WTSM increases through time, confirming that modal shift from bus to rail for trips from Johnsonville / Wellington's northern suburbs in WTSM is far less pronounced in WPTM.

This, together with analysis presented previously in this report, suggests that there is a bias towards rail on the Johnsonville line in the mode split part of WTSM under future scenarios that included population growth in North Wellington and integrated ticketing.

When utilising WTSM and WPTM 2013 forecast outputs, GWRC and appointed consultants should consider whether this response to integrated ticketing is realistic. In particular the more pronounced modal shift from bus to rail in WPTM compared to WTSM.

PT passenger volume change plots are included in Appendix C.

## **6. Conclusions**

From the analysis presented in this technical note it can be seen that:

- Growth is being correctly applied between WTS defence and WPTM in the AM period and to a lesser extent in the IP period.. AM and IP response is similar between WTS defence and WPTM and also inline with the 2011 model indicating that the growth from WTS defence is correctly being applied to WPTM.
- Integrated ticketing is implemented in the base forecast models from 2023 onward. This has the effect of increasing the rail to bus transfers at Wellington Station from 2171 to 7551 in 2023, a 347% increase.
- Generally a good match is seen between WTS defence and WPTM across all PT screenlines in the CBD. Some differences are seen in the forecast years across the north screenline where the rail usage is low and bus usage high in WPTM compared to WTS defence. This suggests that PT services are being assigned differently for PT users across the north screenline in WTS defence and WPTM.
- The Johnsonville PT use has been compared in WPTM and WTS defence, where users have a choice between rail and buses. This comparison suggests that there is a bias towards rail on the Johnsonville line in the mode split part of WTS defence under future scenarios that included population growth in North Wellington and integrated ticketing that is less pronounced in WPTM.

This analysis indicates that the 2013 update of WPTM performs similarly to the previous 2011 version.
