# Scope of work for all working groups

- Developing the scope of work will be one of the first tasks for each working group
- Each WG's scope of work to be approved by Committee
- Attached as appendices to the approved standard Terms of Reference (ToR) for working groups

# Values & Attributes WG: scope of work

The purpose of the Values and Attributes working group is to provide the committee with information and options so that the committee can efficiently identify and agree on TAoPW values and attributes.

This information will be provided by the working group through:

- consolidating the committee values associated with freshwater management into similar themes,
- refining the values during the community engagement phase as more community members have their say (via Bang the Table/community events),
- using the consolidated values to inform each values' attributes (the attributes that will be used to test how different options for managing land and water enhance or detract from the values of freshwater in the Whaitua).
